

# Chemicals Play A Vital Role In Our Daily Life

Everything and anything we can hold, smell, taste or use consists of matter. All matters including our body is made of chemicals.

Water is composed of two hydrogen atoms bonded to one oxygen atom, i.e., (H<sub>2</sub>O).

**Water is the largest chemical on planet earth!**

The water that we splash on our face in the morning is chlorinated to ensure our health and safety.

Our body is made of chemicals and elements;

**62%** of human body comprises water.

The toothpaste that we use contains chemicals – even an ayurvedic toothpaste is no different.

Our house, from the floor to the walls to the ceiling contains chemical materials.

Our dress, shoes, chappals, soaps, shaving kits, shampoo, mobile phones, computers, cars, bikes, papers, printers, furniture, mirrors, bed, pillow, fan, air conditioner, utensils, even the diapers and sanitary pads, etc., - contain a variety of chemicals in them.

The food we eat are also made up of chemical substances. For example, nutrients such as carbohydrates, protein, fat and fibre are composed of chemical compounds.

FIBER

FATS

PROTEINS

CARBS

All the medicines that we consume are made of chemicals.

**Hypocrites are those who preach something and do not practice what they preach.**

**The modern hypocrites condemn chemicals every day. Yet, they use all sorts of chemicals in their daily lives.**

**Let us not be hypocrites.**

**Remember, life is impossible without chemicals.**

**Chemicals are essential to meet the socio economic goals of the world community as well as the global food and health security.**
