

World Environment Day

5th June

On this day, let us avoid environmental pessimism!

None of these doomsday predictions turned out to be true.

In 1968 Paul Ehrlich, author of “The Population Bomb”, predicted that ***“The battle to feed all humanity is over... hundreds of millions of people will starve to death in 1970s and 1980s”.***

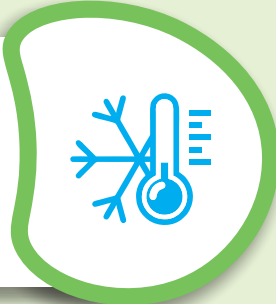

In January 1970, Life Magazine wrote:

“... by 1985 air pollution will have reduced the amount of sunlight reaching earth by one-half”.

American Ecologist Kenneth Watt said in 1970:

“The world has been chilling sharply for about 20 years... the world will be about 4 degrees colder for the global mean temperature in 1990, but 11 degrees colder in the year 2000”.

Relax. The world today is much cleaner, greener, richer than before with abundant food, less hunger, less poverty and longer life expectancy.

Issued by Centre for Environment & Agriculture (CENTEGRO), a Mumbai based think tank. We actively work, among others, on matters that concern Indian agriculture, trade, economy, health and environment.
